Volatility averages around 15%, is often within a range of 10-20%, and rises and falls over time. More recently, volatility has risen off historical lows, but has not spiked outside of the normal range.

What is Volatility and is it Normal? - Foster & Motley

insights : 2024/02/20 : what-is-volatility-and...

In the stock market context, rapid price fluctuation in either direction is considered as volatility. Therefore, a high standard deviation value means prices can dynamically rise or fall and vice versa. In most cases, a surge or dive of 1% in market indexes classifies it as a volatile market.
