Each Minesweeper game starts out with a grid of unmarked Squares. After clicking one of these squares, some of the squares will disappear, and some will remain blank; and some will have numbers on them. It's your job to use the numbers for figuring out which squares are safe to click and which are safe to avoid. This is a challenging game, and it's a good idea to use a strategy when playing. If you're new to the game, it's a good idea to start with a small grid and work your way up to larger grids. The numbers on the squares are a key to solving the game, and it's important to pay attention to them. If you see a 1, it means there is only one mine in the adjacent squares. If you see a 2, it means there are two mines in the adjacent squares. If you see a 3, it means there are three mines in the adjacent squares. If you see a 4, it means there are four mines in the adjacent squares. If you see a 5, it means there are five mines in the adjacent squares.
