

# O O bet365

$y = f(x)$ . 2 Express  $x$  ou  $f$  in terms of  $Y$ . 3 Find the values of  $f$  where  $f$

( $Y$ ) is defined.

4 Eliminate  $x$  from the equation and that will make an equation

in terms of  $Y$  only.

5 Write the equation in the form  $y = f(x)$ .

6 Check your solution by substituting the values of  $x$  and  $y$  into the original equation.
