matemática 2 diferenças

A soma de dois inteiros, portanto, é um inteiro. Teorema 1.

The probability of a ball landing in bucket  $k$  is the

number of paths to the bucket multiplied by the probability of each path:

$$p(k) = n! / (k!(n-k)!)$$

Page 5 Clicker Question #1 For a 7-row plinko, with

8 buckets labeled 0 to 7, what is the probability of a ball landing in bucket 1

Plinko Probabilities, Part 4 Random Variables and the Expected Value

The Mathematics of the Board At each level, the penny will be

"knocked" either to the left or to the right, each with a 50/50

probability. 
$$p(\text{left})^{n_1} p(\text{right})^{n_2}$$

But there will be many ways of taking  $n_1$  lefts and  $n_2$  rights over  $N$  levels. If all  $N$  choices are

left, for instance, there is only one way.

The Probability ("Plinko") Board
