The probability of a ball landing in bucket k is the number of paths to the bucket multiplied by the probability of each path:

$$p(k) = n! / (k!(n - k)!)$$

Page 5 Clicker Question #1 For a 7-row plinko, with 8 buckets labeled 0 to 7, what is the probability of a ball landing in bucket 1?

[The Mathematics of the Board](#) At each level, the penny will be "knocked" either to the left or to the right, each with a 50/50 probability.

$p(\text{left})^{n_1} p(\text{right})^{n_2}$

But there will be many ways of taking n_1 lefts and n_2 rights over N levels. If all N choices are left, for instance, there is only one way.
