

# O O bet365

$$\frac{a/b}{c/d} = \frac{ad}{bc}$$

In a 2-by-2 table with cells a, b, c, and d (see figure), the odds ratio is odds of the event in the exposure group (a/b) divided by the odds of the event in the control or non-exposure group (c/d). Thus the odds ratio is  $(a/b) / (c/d)$  which simplifies to  $ad/bc$ .
